

Network

**Accelerating the advent
of neural interface powered
dreams**

Mission Statement

To accelerate the advent of neural interface powered dreams by creating a neuroscience market and making tools for the mind to free itself.

A Tale of Two Worlds: Galileo

Galileo

Foundation of
Western Science.

World Discovery

Western exploration
of the world.

Space Exploration

Becoming a space
faring civilization.

Matrix / Metaverse

Cyberpunk-style
BCI-powered open
virtual worlds.

A Tale of Two Worlds: Buddha

Buddha

Foundation of
mind sciences

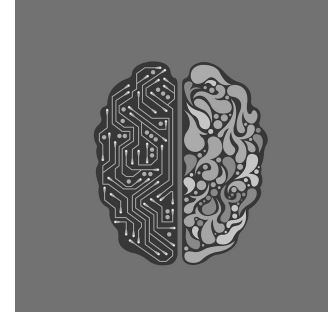

Meditation practices

Attain freedom from
meditative practice.

Internal state exploration

Dream yoga, meditation,
jhanas, psychedelics, etc.

New Telescope

Tools to go explore
nature of reality
and consciousness

What We're Building

- Network is building a market for neuroscience research and ideas funded through novel incentive mechanisms in order to accelerate the advent of neural interfaces.
- Network is developing tools for individuals to free themselves and realize their dreams with the long-term goal of neural interface powered dreams.

Loops Govern Our Reality

- A layer of infinite, invisible mental loops govern our reality and they represent the underlying cause of our problems. We cannot understand our problems without understanding the loops that preceded them.
- Being stuck in infinite mental loops limits our freedom and ability to transform our dreams into reality. We are stuck looking outward for solutions that will never fix problems that are only solved by venturing within.

Free Our Minds

- We need to mobilize the mind and break free from the mind games we play with ourselves and step into the present.
- Being able to break free from those loops allows us to experience reality in a new way, perceive the world with new eyes and live as truly free agents offering us the opportunity to create meaningful change.
- The cost is real. U.S. national spending on mental health is over \$200 billion every year. Worldwide almost one billion people are affected by mental health disorders and about one million people die by suicide annually.

What Could Help Us Break Our Loops?

- Access to experiences in which we can enter a virtual reality of our mind on a regular basis.
- A safe environment to break free from loops that negatively govern our reality and build positive loops to change our reality.
- An open and permissionless medium through which others can build guided experiences for others.

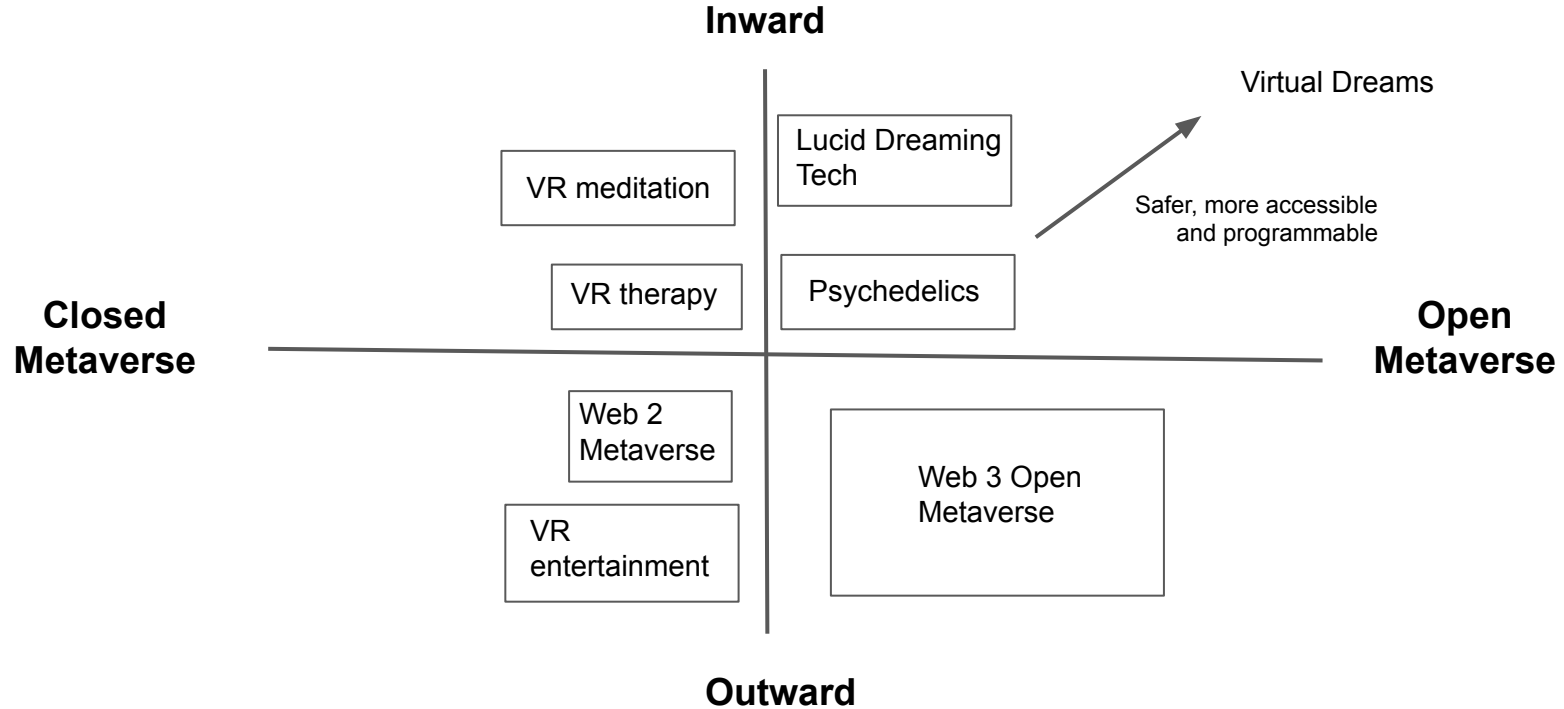

Neuro Finance: Trillion Dollar Industry

- By building a neuroscience market with novel incentive mechanisms, we can accelerate the industry and align industry participants toward common goals.
- We will create neuro finance (NeFi) contracts to increase funding into neuroscience and specifically neural interfaces.
- By creating a neuroscience market we will have the resources to build neural interface powered dreams.

Properties of Neural Interface Powered Dreams

- A fascinating laboratory to explore the nature of reality.
Experience a new state of mind with more agency and freedom.
- A self-governing tool to break free from infinite loops, face our fears and heal ourselves.
- A novel medium to see ourselves & the world with new eyes and build a new life.

Virtual Dreams are the Smart Contracts of the Metaverse

Dreams Will Become An Industry Of Its Own

Brain Computer Applications

- Network states
- Programmable psychedelics
- Dream incubation
- Lucid dream induction
- Mental health applications
- Mental training programs

Network Whitepaper

Network

A Virtual Dream and Brain Computer Protocol

Link Daniel

January 21, 2021

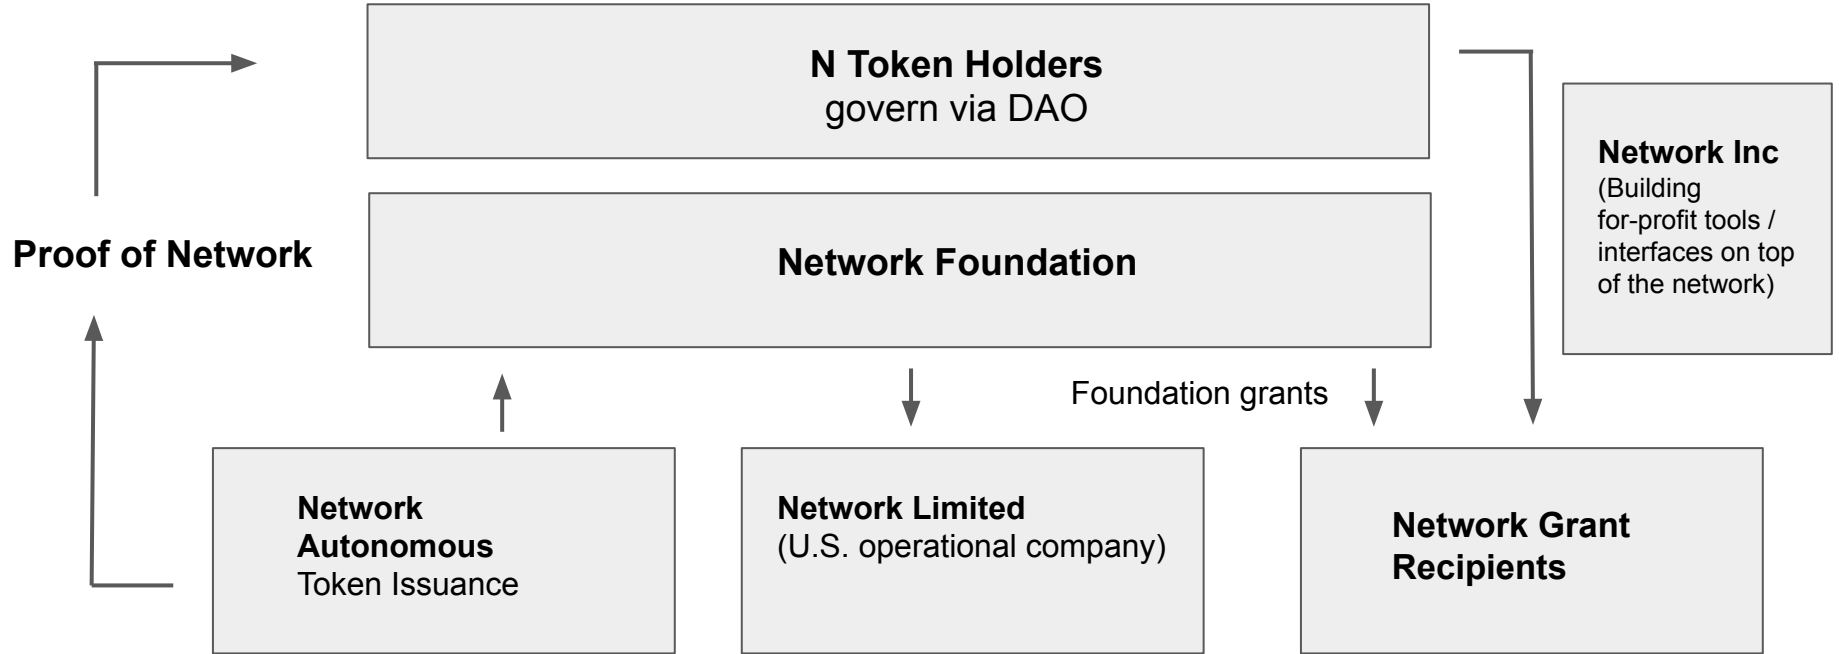

Abstract:

A decentralized brain computer network would allow anyone in the world to participate in exploring the frontier of the brain while creating a strong forcing function to accelerate the number of neurons we can currently interface with. A network of peer-to-peer brain computers would empower individuals to own the data that would flow between brains and computers. By creating a network of open, permissionless protocols for brain computers, a diverse set of stakeholders will govern and guide its future. Virtual dreams as a novel medium could become an alternative reality to explore the nature of reality and accelerate progress in the mind sciences. Other brain computer applications could be developed as tools for individuals to heal and liberate themselves and others.

A brain computer network would allow anyone in the world to participate in exploring the frontier of the brain while creating a strong forcing function to accelerate the number of neurons we can currently interface with. A network of peer-to-peer brain computers would empower individuals to own the data that would flow between brains and computers. By creating a network of open, permissionless protocols for brain computers, a diverse set of stakeholders will govern and guide its future. Virtual dreams as a novel medium could become an alternative reality to explore the nature of reality and accelerate progress in the mind sciences. Other brain computer applications could be developed as tools for individuals to heal and liberate themselves and others.

Whitepaper:
network.foundation/network.pdf

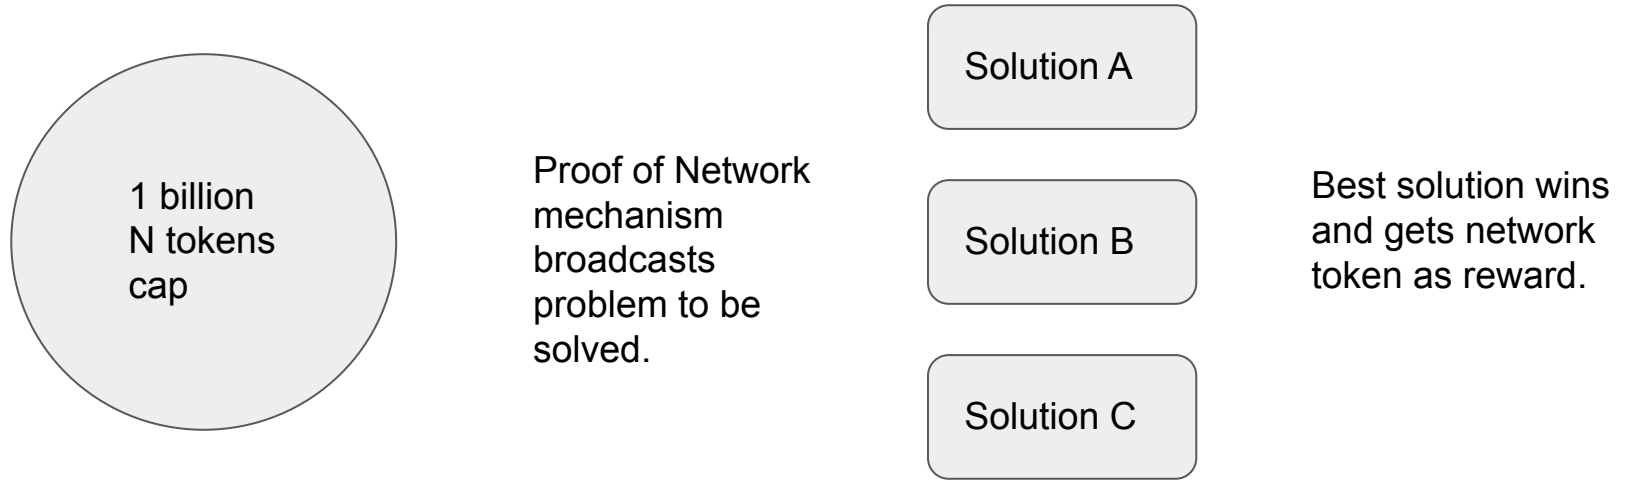

Network Entities

Proof of Network As Novel Incentive Mechanism

- We bootstrapped the foundation in the past two years without selling the network token to anyone.
- The token will be distributed according to Proof of Network to those who solve problems that help the network grow and realize its purpose.

Proof of Network Token Distribution

Network Passport As Identity Layer

- Become a netizen in one of the first network states inside the ever expanding virtual world.
- A network passport will be an identity that you own that cannot be revoked by corporations, companies, states or even the network itself.
- This will serve as a form of identification and as a specific login for the value that comes by being a netizen of the network.

First Steps Realized

- We have started to build a community of a few hundred people from various industries.
- We have built a small team to bootstrap operations.
- We have established the legal entities required to run the network.
- We launched the token contract and published the whitepaper as as a blueprint.

Network Master Plan

1. Build a neuroscience market with novel incentives in order to accelerate industry and accumulate capital for network to develop dream technology.
2. Create tools for individuals to free their mind and realize their dreams with existing technology.
3. Use resources and industry position to build first version of neural interface powered dreams.
4. Develop ecosystem of builders that will create various experiences using dreams as a medium.
